Data Collection Accuracy

The numbers below are a measure of data quality, for both main PDM (100%) and re-visit (5%) data.

Key definitions for this page include:

- *Matching records: revisit records that form a matching pair with a PDM record, when automatic matching is attempted.*
- *Key data match: a matching pair has matching key data if the LLINs hung, number of sleeping spaces and whether the nets are used correctly are exactly the same in PDM and revisit records.*
- *Complete match: a matching pair has a complete match if, in addition, LLINs present not hung and the number of people in the household are exactly the same in PDM and revisit records.*

PDM

9 month PDM

Summary

Matching Households	HIGH Accuracy	MEDIUM Accuracy	LOW Accuracy
943	346 (37%)	222 (24%)	375 (40%)

This table shows the proportion of matching pairs that fall into three categories of accuracy: high (complete match), medium (key data match only), and low (key data mismatch).
