

Evidence Action Accelerator Pipeline Summary

Important note: The following programs are currently prioritized for early stage research in the first half of 2022, though this list is evolving and will grow along with our increasing bandwidth. Programs that are not deprioritized based on that research will be scoped, then possibly field tested. *These programs should not be interpreted as programs we find especially promising.* Rather, these programs have passed our criteria thresholds in our earliest stages of research, and they merit deeper investigation.

Clean Water:

- Coupons for safe water (WaterGuard)

Maternal/neonatal programs:

- Multiple Micronutrient Supplementation (MMS) for pregnant women
- Calcium supplementation
- Balanced Energy Protein supplementation (BEP)
- Chlorhexidine for umbilical cord care (CHX)
- Kangaroo Mother Care (KMC) (home-based)

Nutrition programs:

- Micronutrient Powders
- Lipid Nutrient Supplements

School-based programs:

- Intermittent Preventive Treatment of malaria (IPTsc)
- Anemia testing and treatment (India)
