Maternal and Child Undernutrition

Published: January 16, 2008

Executive Summary

"Nutrition is a desperately neglected aspect of maternal, newborn, and child health. The reasons for this neglect are understandable but not justifiable."

More than a third of child deaths and 11% of the total disease burden worldwide are due to maternal and child undernutrition. These and other stark findings are the conclusions of an international collaboration of investigators published as part of *The Lancet's* Maternal and Child Undernutrition Series.
